

SATELLITE® KIT

Our large 14 slot Satellite® Kit allows you to control up to 14 universes of Data wirelessly or with Ethernet with each single node.

An RGB Led Illuminates a translucent window linking the color of your transmitter to your receiver to indicate which universe you're working in.

Need more universes of Data? Just add more Satellites and control up to 32 via art-Net and sACN. Data hungry fixtures have changed the way we manage data and Satellite® is the answer.
